ABOUT

Software Engineer with 2+ years of experience across various tech stacks. I work across the stack to ship stable, user-focused features and contribute to real products. Background in blockchain and RWA tokenization enhances technical breadth while keeping core focus on modern software engineering.

EXPERIENCE

AI Software Engineer(Co-op), George Brown College Aug 2025 – Dec 2025 | Toronto, CA

- Built an offline LLM bridge for Android system using a Termux-hosted Ollama model and a file-based IPC workflow.
- R&D an on-device RAG stack using TFLite embeddings, cosine search, and an MLC-LLM Vulkan-accelerated Phi-3 Mini model.
- Designing a modular SDK enabling vector search, namespaces, and document ingestion- Conducted iOS/Android IPC feasibility analysis (AIDL, Intents, URL Schemes) to guide architecture within sandbox limits.

Software Engineer (Co-op), Aurkei Inc. May 2024 – Aug 2024 | Arizona, USA

- Built Aurkoin (ERC-20), a secure healthcare-data token
- Designed tokenomics to cap inflation and increase retention, which was later adopted into the product roadmap.
- Integrated mint, burn, and reward logic into smart contracts, boosting platform transaction volume.

Research Lead, George Brown College Apr 2024 – Aug 2024 | Toronto, CA

- Led a 10-member team to deliver a 60-page tokenization framework covering 14 asset classes.
- Produced market and regulatory insights across agriculture, real estate, energy, and healthcare.
- Secured expert and policymaker approval, positioning the framework for pilot deployment.
- Optimized research workflow with weekly sprints, cutting turnaround time by 25%.

Full Stack Developer, Aeropres India PVT LTD Jun 2022 – Jun 2023 | Ahmedabad, IN

- Optimized Moramba app performance by 13% through Code refactoring, Code Splitting, and lazy loading, improving SaaS scalability.
- Rebuilt BreathEasy's UI for full tablet and mobile responsiveness, earning 100% positive tester feedback.
- Developed Solidity contracts and wallet integration for SilverlineNFT, enabling secure in-house NFT minting.
- Delivered cross-functional features across frontend, backend, and blockchain, cutting release cycles by 20%.

Web Developer Intern, Infolabz IT Services Jan 2022 – Apr 2022 | Ahmedabad, IN

- Developed "HealthX," an IoT vital-sign monitoring MVP using Arduino.
- heart-rate and SpO₂ sensors, streaming real-time data to the cloud ahead of schedule.
- Built a ReactJS dashboard with PHP/SQL backend for live charts and logs, boosting clinical monitoring efficiency by 30%.

SKILLS

- **Languages:** JavaScript/TypeScript, Solidity, Kotlin, Swift
- **Frontend:** React, Redux, Tailwind CSS, Shadcn Framer Motion
- **Mobile:** React Native, Android (Kotlin), iOS (Swift)
- **Backend & APIs:** Node.js, Express, REST, GraphQL
- **Blockchain:** blockchain Integration, ERC-20, Tokenization, Web3.js, Ethers.js
- **Cloud & DevOps:** GCP (GKE, Firestore), Docker, Kubernetes, GitHub Actions, Jenkins
- **Databases:** MongoDB, Supabase, Firebase/Firestore
- **Testing & Tools:** Postman, JMeter
- **Design:** Figma, Adobe XD, Photoshop, After Effects

EDUCATION

Post-Graduation (Mobile Apps), George Brown College 2024 – 2025

Post-Graduation(Blockchain), George Brown College 2023 – 2024

Bachelor of Engineering (Computer), Gujarat Technological University 2018 – 2022

PROJECTS

Privacy First AI system - Autark-AI 🌐, Android | IOS Aug 2025 – Present

- Built an offline LLM bridge via a Termux-hosted Ollama model using a custom file-based IPC layer for on-device summarization.
- Developing a full on-device RAG pipeline using TFLite embeddings, Room DB, cosine search, and an MLC-LLM Vulkan-accelerated Phi-3 Mini model.
- Designing a modular SDK for vector search, document ingestion, and namespaces based on Android/iOS IPC and sandbox constraints.

EdBucks 🌐, Blockchain Based Solution for Student-Aid Funding Feb 2024 – Apr 2024

- Shipped a full-stack dApp that combines Solidity smart contracts with a React/Tailwind UI, cutting grant disbursement from days to minutes on testnet.
- Built a CI/CD pipeline (GitHub Actions → Jenkins → Kubernetes) achieving 100 % automated testing and one-click rollouts.
