ABOUT

Software Engineer with 2+ years of experience across various tech stacks. I work across the stack to ship stable, user-focused features and contribute to real products. Background in blockchain and RWA tokenization enhances technical breadth while keeping core focus on modern software engineering.

EXPERIENCE

Software Engineer, AI (Co-op), George Brown College Aug 2025 – Dec 2025 | Toronto, CA

- Built an offline LLM bridge for Android system using a Termux-hosted Ollama model and a file-based IPC workflow.
- Researched and developed an on-device RAG stack using TFLite embeddings, cosine search, and an MLC-LLM Vulkan-accelerated Phi-3 Mini model.
- Designing a modular SDK enabling vector search, namespaces, and document ingestion- Conducted iOS/Android IPC feasibility analysis (AIDL, Intents, URL Schemes) to guide architecture within sandbox limits.

Software Engineer, Blockchain (Co-op), Aurkei Inc. May 2024 – Aug 2024 | Arizona, USA

- Built Aurkoin (ERC-20), a secure healthcare-data token.
- Designed tokenomics to cap inflation and increase retention, which was later adopted into the product roadmap.
- Collaborated with product and business stakeholders to translate tokenomics requirements into technical smart contract specifications and implementation plans.
- Worked across blockchain engineering and product teams to ensure secure implementation of minting, burning, and reward distribution processes.

Research Lead, George Brown College Apr 2024 – Aug 2024 | Toronto, CA

- Led a 10-member team to deliver a 60-page tokenization framework covering 14 real-world asset classes.
- Produced market and regulatory insights across agriculture, real estate, energy, and healthcare.
- Produced business and technical recommendations evaluating tokenized asset workflows, blockchain network design choices, and operational impacts.
- Optimized research workflow with weekly sprints, cutting turnaround time by 25%.

Full Stack Developer, Aeropres India PVT LTD Jun 2022 – Jun 2023 | Ahmedabad, IN

- Optimized Moramba app performance by 13% through Code refactoring, Code Splitting, and lazy loading, improving SaaS scalability.
- Rebuilt BreathEasy's UI for full tablet and mobile responsiveness, earning 100% positive tester feedback.
- Developed Solidity contracts and wallet integration for SilverlineNFT, enabling secure in-house NFT minting.
- Delivered cross-functional features across frontend, backend, and blockchain, cutting release cycles by 20%.

SKILLS

- **Languages:** JavaScript, Solidity, Kotlin, Swift
- **Frontend:** React, Redux, Tailwind CSS, shadcn/ui, Framer Motion, HTML, CSS
- **Backend & APIs:** Node.js, Express, REST
- **Mobile:** React Native, Android (Kotlin), iOS (Swift)
- **Blockchain:** Asset Tokenization, Wallet Integration, blockchain Integration, ERC-20, Tokenization, Web3.js, Ethers.js
- **DevOps:** Docker, GitHub Actions, Jenkins
- **Databases:** MongoDB, Supabase, Firebase/Firestore
- **Testing & Tools:** Postman, JMeter
- **UI Design:** Figma, Adobe XD, Photoshop, After Effects

EDUCATION

Post-Graduation (Mobile Application Development), George Brown College 2024 – 2025

Post-Graduation(Blockchain Development), George Brown College 2023 – 2024

Bachelor of Engineering (Computer), Gujarat Technological University 2018 – 2022

PROJECTS

Privacy First AI system - Autark-AI 🌐, Android | iOS Aug 2025 – Present

- Built an offline LLM bridge via a Termux-hosted Ollama model using a custom file-based IPC layer for on-device summarization.
- Developing a full on-device RAG pipeline using TFLite embeddings, Room DB, cosine search, and an MLC-LLM Vulkan-accelerated Phi-3 Mini model.
- Designing a modular SDK for vector search, document ingestion, and namespaces based on Android/iOS IPC and sandbox constraints.

EdBucks 🌐, Blockchain Based Solution for Student-Aid Funding Feb 2024 – Apr 2024

- Shipped a full-stack dApp that combines Solidity smart contracts with a React/Tailwind UI, cutting grant disbursement from days to minutes on testnet.
- Designed blockchain-based funding workflows, smart contract-controlled disbursement mechanisms, and transaction lifecycle processes for educational grant distribution.
- Built a CI/CD pipeline (GitHub Actions → Jenkins → Kubernetes) achieving 100 % automated testing and one-click rollouts.
